

# Podcast Engine

~By Vikram Chourasiya

# Podcast Engine Project Abstract:

The goal of Podcast engine is to provide converting PDF. So, a fundamental requirement of this project is to know everything about books. The other goal is to provide the experience of podcast.

# Objective of Podcast Engine:

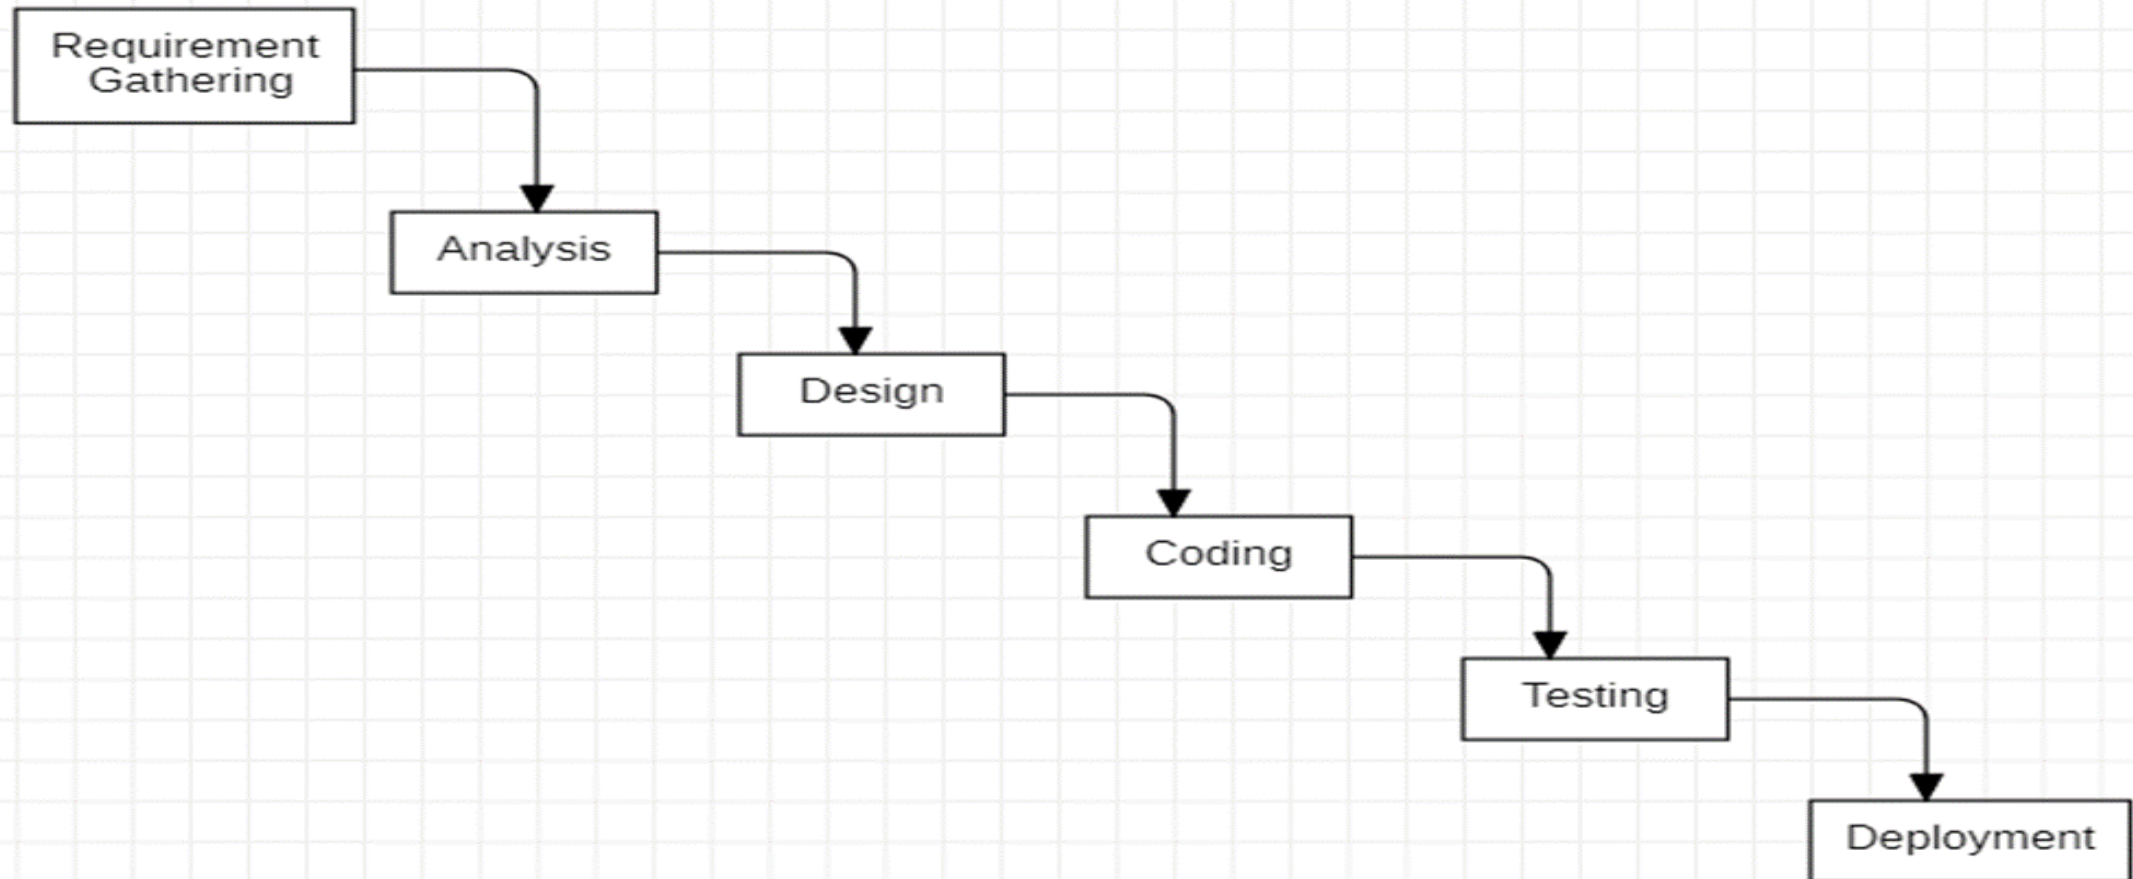

- To explore varieties of books, form different publishers, writers.
- To classify them on basis of public review and their quality no matter which language or budget.
- To have extremely good reading experience for users.
- To listen in two different voices.

# System Description:

This is an application-based system where users can find two options that show how to convert PDF. The application has a special setting in which it has four themes for more user experience. The application has a text box where users can write their own data to be converted.

# Process Model:

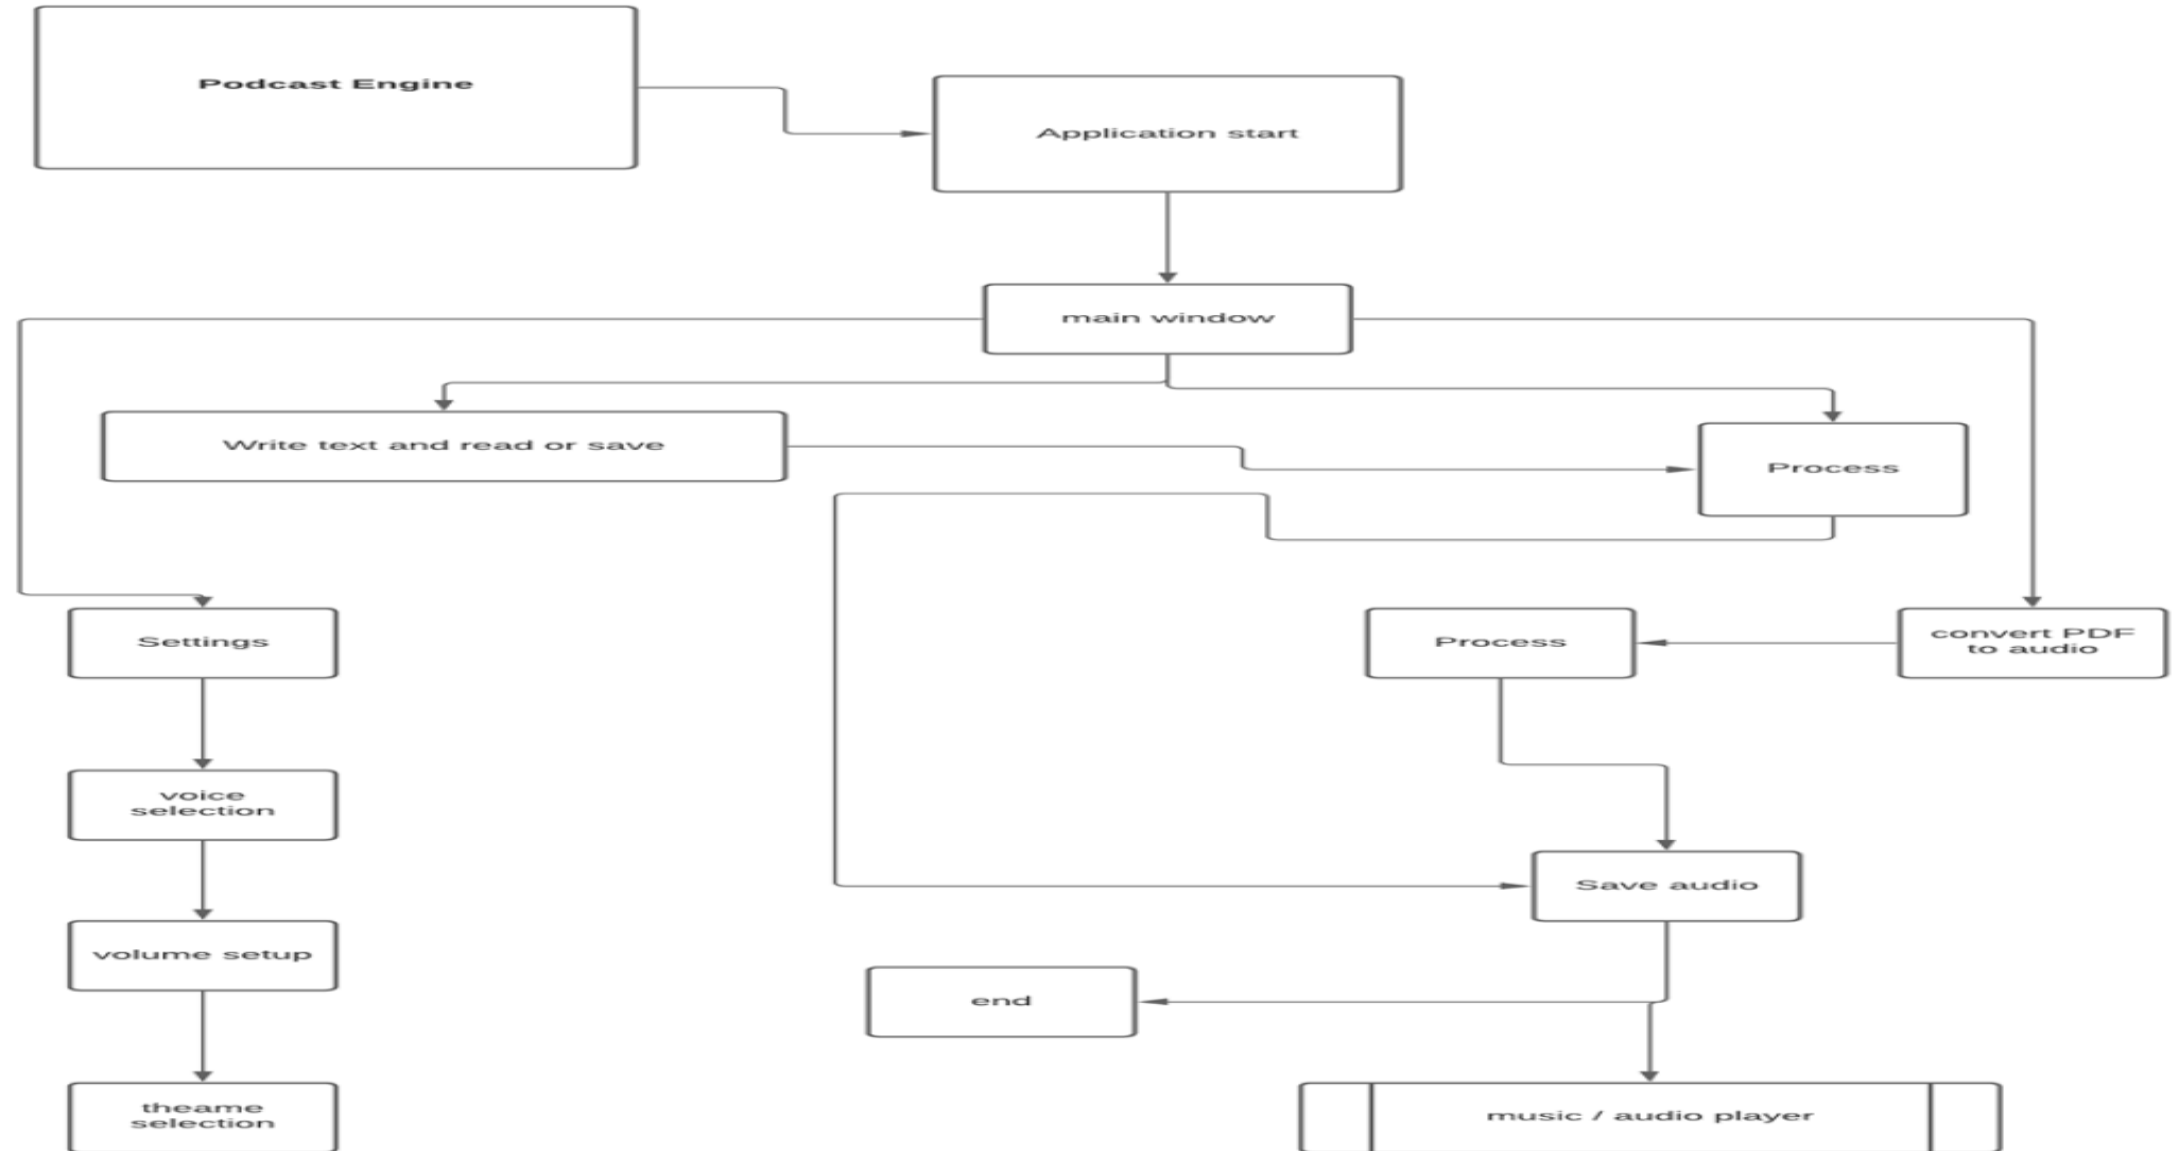

The waterfall model of development has been taken into consideration while developing this project. Every step for updating or improving as this model ensures smooth flow of project development.

# Working Of Podcast Engine

## Activity Diagram:

Activity diagrams are graphical representations of workflows of stepwise activities and actions with iteration and concurrency. Activity diagrams can be used to describe the business and operational step-by-step workflows of components in a system. An activity diagram shows the overall flow of processes.

# System Requirement:

## OS Requirements

- Windows
- Linux
- Android

## Software Requirements

- Pip Install & packages
- Python 3
- Visual Studio Code

# Hardware Requirement:

**Processor:**

**1.0 GHz or Greater**

**Ram:**

**2GB or Greater.**
